

Keystone for Full Motion Video

The Keystone Image Management System now supports Full Motion Video data with storage, geolocation and real-time replay of multiple video streams. Interactive data tagging cues priority video segments for further analysis while comprehensive search functions make large data holdings easy to navigate. The Keystone video capabilities are operational with the Swedish Army and have been trialled with police and fire authorities in the Netherlands.

- Integrated management of multiple video streams
- Real-time video geolocation
- 3D video playback and visualisation
- User-defined tagging of video segments
- Generate video "snapshots" with full image metadata
- Video "snail trail" and rapid mosaicking functions
- Search stored video by location, time and tags
- Supports STANAG 4609-compliant Full Motion Video
- Complementary FMV data simulator
